

Active Crisis Consulting utilizes tier one SOF instructors to provide Active Shooter CQB Training for first responder law enforcement officers. When situations become dire and there is no time available to wait on a tactical team, the decision to make entry into a building and confront an active shooter may be the difference between a dangerous security incident and a mass shooting event. Every second is critical during an active shooter event, and first responder law enforcement officers must be prepared to neutralize the threat, when necessary, in order to save lives. Active Crisis Consulting retains a cadre of world class CQB instructors leveraging decades of operational experience to provide this critical training capability to our first responder law enforcement community. We train for any level of experience using tactics that are modified to support law enforcement priorities based on terrorist hostage rescue operations that were originally developed by Naval Special Warfare Development group (SEAL Team Six).
